A healthy knee helps Gerry Faust maintain an active life.
PAIN WAS ROUTINE FOR THE FORMER COACH UNTIL SURGERY AT CRYSTAL CLINIC ORTHOPAEDIC CENTER

Gerry Faust roamed the sidelines as a head football coach for four decades, beginning at Cincinnati Archbishop Moeller High School, followed by stops at the University of Notre Dame and University of Akron.

As a coach, his greatest thrill wasn’t success on the field; it was watching his former student-athletes become successful in life. “As a coach, you hope to have something to do with their success,” he says.

Today, Faust, 77, is retired from coaching. That doesn’t mean he is idle. He spends much of his time golfing, playing cards and bicycling in his Fairlawn neighborhood; spending time with his three children and six grandchildren; and traveling extensively to deliver motivational speeches, mostly for charity (about 70 speeches a year).

Being as active as he is in retirement, Faust can’t afford to let pain stand in his way. But knee pain was a way of life for Faust for many years.

Faust played quarterback for the University of Dayton in the late 1950s. In one game, he was blindsided going back to pass, injuring his left knee. The injury lingered as his coaching career progressed. “I could bear the pain, but it got worse as the years went by,” he says.

Finally in 1999, Faust saw Ivan Gradisar, M.D., of Crystal Clinic Orthopaedic Center for knee replacement surgery. The surgery was successful but Faust

TEAMWORK IS IMPORTANT FOR SUCCESSFUL SURGERY

Crystal Clinic Orthopaedic Center provides a team approach to patient care. Surgeons work closely with nurses and anesthesiologists such as Thomas E. Mark, M.D., who was on the team when former coach Gerry Faust had knee surgery.

After surgery, physicians work closely with physical therapists. Crystal Clinic Orthopaedic Center believes physician-therapist coordination leads to better patient results and physical outcomes.

“Team play is very important in athletics, but it’s also very important when having surgery,” Faust says. “Crystal Clinic Orthopedic Center has a great team. That’s why my surgery was a success.”

Gerry Faust and friends enjoy their time together on the golf course.
decided to self-rehabilitate. “Being an old coach, I figured I could do it on my own,” he points out. “I didn’t rehab it correctly.”

Several years later the knee began to slip, causing pain. Faust went back to Crystal Clinic Orthopaedic Center, where Phillip Lewandowski, M.D., performed knee revision surgery in 2008. Once again the surgery was successful, but this time Faust underwent land (stretches and weightlifting) and water (swimming exercises and walking) therapy. “Care after surgery is as important as the surgery itself,” he says.

Faust says his new knee makes him feel like he is 50 again. He enjoys his hobbies and, of course, visiting his family whether it is in the Akron area or Cincinnati. He knows these activities would be next to impossible without knee surgery.

“I couldn’t ask for a more successful surgery,” Faust says. “The care was excellent and the therapy was outstanding. I’m very blessed. I’m doing everything I want to do.”

CRISTAL CLINIC ORTHOPAEDIC CENTER

You don’t have to live with knee or hip pain. The joint specialists of Crystal Clinic Orthopaedic Center, a partnership with Summa Health System, can treat your knee or hip condition to improve your quality of life. “Once you get to the point where the pain becomes unbearable, find the best surgeon, have the operation and undergo therapy,” says Crystal Clinic Orthopaedic Center knee patient and former head football coach Gerry Faust. “You’ll be up and going in no time.”

To schedule an appointment with a joint specialist or to get a free copy of Playbook for Knee and Hip Pain, call toll-free (855) 728-4660. To hear more about Gerry Faust’s story or about the recovery of other Crystal Clinic Orthopaedic Center total joint patients, go to crystalclinic.com/Gerry.
As she was preparing for her family’s Easter celebration on Good Friday 2011, Roberta Saunders remembers seeing lightning. She thought it was odd because she didn’t hear thunder. She quickly forgot about it.

The following morning, she saw what she thought was a spot on the right lens of her glasses but couldn’t remove it. She opted to ignore it but was dismayed to find that the spot was bigger on Easter morning and now included a gray line that extended halfway across her field of vision.

Her family urged her to see her primary care physician who immediately sent her to the James and Linda Venner Emergency Center at Summa Wadsworth-Rittman Hospital.

Rachel A. Biedenbach, M.D., an ophthalmology specialist at Summa Wadsworth-Rittman Hospital, diagnosed a detached retina. Six hours later, Saunders had emergency surgery at Summa Akron City Hospital.

Saunders awoke to learn that although the surgery was a success her vision problems were not over. She needed cataract surgery on both eyes. Just 55 years old, with a history of vision problems, it was possible that the retina surgery would not improve her vision, leaving her legally blind.

Saunders had one cataract removed in October 2011 and the other in November. Today, her vision is better without glasses than it was before with glasses. She is enjoying her hobbies – reading historical novels, gardening, participating in pre-1840 historical reenactments with her husband, Dan, and spending time with her family, including her grandchildren Amelia and Aaron.

“The difference is amazing,” she says. “Colors are richer, everything is sharp.”

One year ago, Saunders was faced with blindness and filing for disability. She was impaired to a non-functional level. Now, she’s working full time and recently passed her driver’s test with flying colors. “I feel like I have my life back,” she says.

As a former nurse at Summa Wadsworth-Rittman Hospital, Saunders knew what to expect in terms of patient care. “Dr. Biedenbach was very supportive and realistic at the same time,” Saunders says. “I knew the risks but I knew I was in good hands.”

The Wadsworth Eye Clinic provides comprehensive care and services, ranging from eye exams to surgery. To set up an appointment, call (888) 720-5318.
Tyler Taigen, M.D., has one goal for Summa Health System: That it is recognized as a center of excellence for the treatment of atrial fibrillation (a-fib). “I want to make sure everyone with a-fib in Akron has the opportunity to receive the same level of care as anywhere else in the country,” he says.

Dr. Taigen, a physician with Summa Physicians Inc., began as director of Summa Cardiovascular Institute’s a-fib program in July. Care is comprehensive and includes:

- A device lab for event monitors
- An electrophysiology lab
- Nurse practitioners
- Highly trained nurses
- Technology that is on par with other hospitals

A-fib is an irregular and often rapid heart rate that can cause poor blood flow to the body. During a-fib, the heart’s two upper chambers (the atria) beat chaotically and irregularly and out of coordination with the two lower chambers (the ventricles). Symptoms include heart palpitations, shortness of breath, fatigue and effort intolerance (routine tasks usually easy but are now harder).

There are many risk factors that can contribute to a-fib, such as high blood pressure, diabetes, obesity and sleep apnea. However, a large portion of the population experiences a-fib but exhibit none of the risk factors, Dr. Taigen says.

Episodes of a-fib can come and go or it may be chronic. In most cases, a-fib is not life-threatening on its own. But it is a serious medical condition that can require emergency treatment. Left untreated, it could lead to heart failure or stroke.
Within the past 20 years, the medical community has increasingly recognized that behavioral health interventions can improve the physical well-being of patients diagnosed with heart disease.

That’s why Summa Cardiovascular Institute (SCI) recently added a new component to its heart care programs to address depression and other issues that can impact the physical health of patients. Led by Erin Farrer, Ph.D., a clinical psychologist with Summa Physicians Inc., SCI’s new behavioral health program offers heart patients and their families:

- Assistance with lifestyle changes (smoking cessation, diet, exercise regimen adherence, etc.)
- Treatment for symptoms related to depression, anxiety, post-traumatic stress disorder (PTSD) and social support stress
- Treatment for fear and anxiety symptoms related to an implantable cardioverter defibrillator (ICD) or pacemaker
- Advice for caregivers and family members on how to prevent stress-related conditions

Farrer uses a combination of cognitive behavioral therapy, relaxation and mindfulness techniques to help patients learn to cope with heart-related issues. Mindfulness techniques encourage people to stay in the moment and avoid making judgments about what they are feeling or experiencing.

“There is no fear or no shame in seeking help if you need it,” she says. “We live in a society that says a pill can make you happy all of the time. But that isn’t realistic.”

Heart patients need to know that all of their emotions deserve respect and compassion, Farrer stresses.

“Just letting someone else know what’s going on inside – what you’re thinking and feeling – can help,” she points out. “I want people not to feel shame when they come here. By participating in your own care, you can get there. You can do it.”
October is Breast Cancer Awareness Month, an annual campaign to educate Americans about the importance of early detection, risk factors, options for diagnosis and treatment, and also to provide public support for breast cancer survivors.

According to the National Cancer Institute:

- One in eight women will be diagnosed with breast cancer during their lifetime
- More than 200,000 women will be diagnosed with breast cancer this year and more than 40,000 will die from the disease
- About 1,700 men will be diagnosed with breast cancer and about 450 will die each year
- When breast cancer is detected early, the five-year survival rate is 98 percent. Unfortunately, more than 30 percent of women are diagnosed after breast cancer has spread beyond the localized stage

Risk factors for breast cancer include:

- **Age:** Risk increases with age; half of all women diagnosed with breast cancer are age 65 or older
- **Diet/lifestyle:** Lack of physical activity, a diet high in saturated fat and alcohol consumption of more than two drinks per day
- **Menstrual and reproductive history:** Early menstruation or late menopause, having your first child at an older age, or not having given birth or taken birth control pills for more than 10 years if you’re under age 35
- **Medical and other factors:** Dense breast tissue, past radiation therapy to the breast/chest area, a history of hormone treatments (estrogen and progesterone) or genetic changes (BRCA1, BRCA2 and others), and ethnicity (Ashkenazi Jewish descent)

The American Cancer Society’s guidelines for cancer prevention include the following suggestions:

- Maintain a healthy weight
- Adopt a physically active lifestyle – exercise 30 to 60 minutes, five days or more per week
- Healthy diet – eat five or more servings of fruit/vegetables daily and limit processed and red meats
- Limit daily alcohol intake to one drink for women and two drinks for men

Breast cancer can be cured if it is diagnosed early and treated quickly. Summa Health System has digital mammography locations in Summit, Portage and Medina counties. To schedule an appointment for a mammogram or an exam at Summa Center for Women’s Health, call (888) 720-5318.

**BE PROACTIVE ABOUT BREAST HEALTH**

The best way to fight breast cancer is to detect the disease in its early stages.

The National Breast Cancer Foundation recommends having a baseline mammogram and annual clinical breast exams by age 40, a mammogram every one to two years between the ages of 40 and 49, and an annual mammogram beginning at age 50.

The National Breast Cancer Foundation has developed a free application for iPhone users, called Early Detection Plan (EDP): Breast Cancer, to remind women to perform routine breast self-exams and to schedule exams and mammograms. There also is an online version of the tool available on the National Breast Cancer Foundation’s website, nationalbreastcancer.org.
Shane Seymour, CFRE, brings nearly 20 years of fundraising leadership to Summa Health System, with service at academic medical centers, integrated healthcare delivery systems, as well as public and private universities. Most recently, Seymour was a senior director with a national fundraising consulting firm. He started as Summa’s chief development officer in April and will lead the development team in executing an aggressive fundraising agenda for the future.

**THRIVE: What drew you to Summa Health System?**

**SEYMOUR:** A number of things initially attracted me to Summa. Its reputation as a highly regarded health system, the position itself, the philanthropic potential that exists here and the location (his wife is from Hudson). Ultimately, it was the people that I met throughout the interview process and the culture of servant leadership that sealed the deal.

**THRIVE: You have led high-performing teams and orchestrated fundraising campaigns ranging in size from $20 million to $1 billion. What are your specific goals for Summa Foundation?**

**SEYMOUR:** Summa already benefits greatly from the support of the community. Philanthropy will greatly accelerate and enhance Summa’s bold plan to transform healthcare in Northeast Ohio. Our goal is to build meaningful partnerships with individuals and organizations that share our vision of improving the health of our community by delivering high quality, integrated care whenever and wherever it is needed.

**THRIVE: What do you consider the biggest challenge in philanthropy today?**

**SEYMOUR:** A very generous philanthropist recently told me, “The days of giving are over. Now, we invest.” His remark is indicative of both the change and challenge in philanthropy today. Donors expect to be authentically engaged with the causes they support and are increasingly reluctant to give to organizations that have not demonstrated the resulting impact of their investment. Increasingly, agreements for larger gifts include specific requirements about how the funds should be used and how the organization will be held accountable for accomplishing the purpose of the gift.

**THRIVE: How do you see your position interacting with Steven Schmidt, chief operating officer of Summa Foundation?**

**SEYMOUR:** I look forward to co-leading the Foundation with Steve. Personally and professionally, we complement each other very well. His expertise and experience at Summa, as well as his involvement in the community, will contribute greatly to the Foundation’s continued success. I’m grateful to have such a talented and capable partner in this endeavor.
Jim DeLeone has been around sports his entire life. He played football at Kent Roosevelt High School and Ohio State University, including under legendary coach Woody Hayes.

After college, DeLeone stayed in shape and eventually began to participate in powerlifting events. In powerlifting, the heavier an athlete is the more he can lift. A standard breakfast for DeLeone included five eggs, bacon, toast and steak, plus many cups of coffee. By age 40, DeLeone’s weight was up to 340 pounds. While the heavy weight benefited his powerlifting, DeLeone’s health began to deteriorate. He suffered from hypertension, obstructive sleep apnea and diabetes. The insulin, heart and cholesterol medications he was taking helped push his weight up further, eventually approaching 400 pounds. A task as simple as walking became difficult.

“I was going downhill,” DeLeone admits. “I could only walk about 100 yards before having to rest. I was so big that I would develop muscle cramps because I wasn’t walking fluidly.”

At the urging of his friend, Kenneth W. Wells, M.D., of Summa’s Bariatric Care Center, DeLeone began the process that would lead to weight loss surgery. He attended Summa’s weight loss informational seminar. In 2010, he underwent laparoscopic gastric sleeve surgery, performed by John G. Zografakis, M.D., director of Summa’s Bariatric Care Center and a physician with Summa Physicians Inc.

Weight loss surgery changed DeLeone’s life. He lost 144 pounds and feels like he is 25 years old again. His diabetes is gone and he no longer needs heart and cholesterol medications. It is easier for him to walk and run. As for eating, DeLeone and his wife like to go out for Sunday breakfast. He orders two eggs and an English muffin, but will bring one egg and one-half of the muffin home, which he eats for lunch. “I still have eyes bigger than my stomach, but my stomach is smaller so I am full sooner,” he points out. “Prior to surgery, I would never get full.”

DeLeone still powerlifts and he is an assistant football coach at Kent Roosevelt. He coaches the long snappers (specialists in snapping the football back to the holder or punter). Prior to surgery, he couldn’t demonstrate the proper technique of snapping the ball because of his weight. Now, he can get into the stance and show his players how it’s done. “It makes it easier for me to coach,” he says.

Summa’s weight loss informational seminar answers questions regarding what to expect before, during and after surgery. It is held monthly at Summa Akron City Hospital or can be viewed online at summahealth.org/onlineseminar. For more information, visit summahealth.org/weightloss.

Jim DeLeone lost 144 pounds after weight loss surgery. His diabetes is gone and he no longer needs heart and cholesterol medications.
New medical director named

Lisa Esterle, D.O., of Summa Physicians Inc. – Family Medicine is the new medical director of Summa Urgent Care and Corporate Health. Dr. Esterle joins the urgent care staff from her practice in Medina.

Summa Urgent Care and Corporate Health, located at 2875 West Market St., Suite B, Fairlawn, is designated as the Akron area’s only Certified Urgent Care by the Urgent Care Association of America. It is staffed by board-certified urgent care physicians who treat adults and children with acute illnesses and injuries.

Summa Urgent Care and Corporate Health is open Monday through Friday, 8 a.m. to 8 p.m., and Saturday and Sunday, 9 a.m. to 5 p.m., as well as all major holidays except Christmas. Appointments are not required.

For more information, call (330) 864-1916.

Dr. Lisa Esterle

MEET THE DOCTORS

Physicians in our communities are ready to serve you

The following Summa Physicians Inc. doctors are welcoming new patients to their practices.
